

## Cricket Delivery Detection and Processing

- It relates to a method of video segmentation, more specifically to a method of detection of video events.
- It present a concise cricket video to the consumer free from advertisements, computer graphics, etc
- It automatically detect the face of the players and enable a consumer to watch the 'deliveries' associated with a particular player
- The implementation involves the reproduction of a cricket video feed.
- Another implementation involves the analysis of plurality of frames from the reproduced video feed. This analysis involves the detection of plurality of contents from the plurality of frames.

Patent Application no. 319/MUM/2015
